WHO COVID-19 dashboard data

Interpretation and correlation of data

Caution must be taken when interpreting all data presented, and differences between information products published by WHO, national public health authorities, and other sources using different inclusion criteria and different data cut-off times are to be expected.

While steps are taken to ensure accuracy and reliability, all data are subject to continuous verification and change. All counts are subject to variations in case detection, definitions, laboratory testing, vaccination strategy, and reporting strategies.

Other important considerations are highlighted under the respective Data Sources below.

COVID-19 downloadable statistical releases

Statistical release

Daily frequency reporting of new COVID-19 cases and deaths by date reported to WHO

WHO stopped requiring daily basis data reporting since August 2023 and the data presented in this dashboard are weekly frequency. However, a few number of countries continues to report at daily frequency which will be updated in this release and Users can find the data at daily granularity mainly for early years of the pandemic in this statistical release.

Download

Statistical release

Weekly COVID-19 cases and deaths by date reported to WHO

Updated weekly. Users should note that, in addition to capturing new cases and deaths reported on any given week, updates are made retrospectively to correct counts on previous weeks as needed based on subsequent information received.

Statistical release

Monthly COVID-19 deaths by age reported to WHO

Updated monthly. Users should note that, in addition to capturing new deaths by age reported on any given month, updates are made retrospectively to correct counts on previous months as needed based on subsequent information received. Not all countries provide detailed age-related information, so the total deaths by age reported in this database might differ from the overall total deaths reported elsewhere in this dashboard.

Statistical release

2024 COVID-19 vaccine uptake data

Quarterly timeseries data on the uptake of COVID-19 vaccines per country in select target population groups, including health and care workers, older adults, adults with chronic conditions, pregnant women, and by sex. Data are available through quarter 3 2024. Frequency and completeness of reporting across target population groups vary by country.

Download

Statistical release

2024 COVID-19 vaccination policy data

Quarterly time series data on target population groups recommended for COVID-19 vaccination against under national COVID-19 vaccination policies per country. Data are available through quarter 3 2024. Frequency and completeness of reporting across target population groups vary by country.

WHO COVID-19 dashboard data sources

COVID-19 hospitalization and ICU admission data

Data in this section are combined from the following sources: official reporting to WHO through regional offices via case report forms or weekly aggregate reporting, and taken from official public websites, not officially reported to WHO. WHO Member States select the reporting system they prefer to use, and data from different reporting systems are reconciled (referred to as "detailed surveillance data"). Individual countries, areas, and territories may decline to allow country-level disaggregation.

Counts primarily reflect laboratory-confirmed hospitalizations, based upon WHO definitions, although some departures may exist due to local adaptations. Counts include both domestic and repatriated cases. Case detection, definitions, testing strategies, reporting practices, and lag times (e.g., time to case notification and time to reporting of hospitalizations) differ between countries, territories, and areas. These factors, amongst others, influence the counts presented, with variable under- or overestimation of true counts, and variable delays in reflecting these data at a global level.

Caveats:

- Completeness for indicators varies between countries, regions, and over time.
- Detailed surveillance data may reflect different sub-national jurisdictions than those used for cases and deaths data, and thus may not follow a similar pattern.
- Reporting delays can be observed.
- Case identification in a country is subject to detection and testing strategies, which vary between countries and over time.
- Regardless of the definitions provided, these data might include incidental hospitalizations and ICU admissions.
- Due to varying degrees of information collection and submission, it is recommended to analyze each country/territory independently.
- Data sources might change over time from universal to sentinel reporting for some indicators in some countries (e.g., new hospitalizations from the United States of America are reported from a

hospital network from 20 February 2024). Due to the scarcity of the reporting globally and the importance of sharing the available information publicly, we continue to reflect this data; please be cautious while interpreting sharp decreases in the volume of data compared to previous periods.

All data represent the date of admission as opposed to the date of reporting. Data are reported remotely and refreshed once a week in this report, while data quality control and data cleaning are continuous.

Thus, they may change based on retrospective updates to accurately reflect trends, changes in country case definitions, and/or reporting practices. Significant data errors detected or reported to WHO may be corrected at more frequent intervals.

COVID-19 case and death data

From the 31 December 2019 to the 21 March 2020, WHO collected the numbers of confirmed COVID-19 cases and deaths through official communications under the International Health Regulations (IHR, 2005), complemented by monitoring the official ministries of health websites and social media accounts. Since 22 March 2020, global data is compiled through WHO region-specific dashboards, and/or aggregate count data reported to WHO headquarters.

Counts primarily reflect laboratory-confirmed cases and deaths, based upon WHO case definitions; although some departures may exist due to local adaptations. Counts include both domestic and repatriated cases. Case detection, definitions, testing strategies, reporting practice, and lag times (e.g. time to case notification, and time to reporting of deaths) differ between countries, territories and areas. These factors, amongst others, influence the counts presented with variable under or overestimation of true case and death counts, and variable delays to reflecting these data at a global level.

All data represent date of reporting as opposed to date of symptom onset. All data are subject to continuous verification and may change based on retrospective updates to accurately reflect trends, changes in country case definitions and/or reporting practices. Significant data errors detected or reported to WHO may be corrected at more frequent intervals.

New case and death counts from the Region of the Americas

Starting from the week commencing on 11 September 2023, the source of the data from the Region of the Americas was switched to the aggregated national surveillances, received through the COVID-19, Influenza, RSV and Other Respiratory Viruses program in the Americas. Data have been included retrospectively since 31 July 2023.

Rates

<0.001 per 100,000 population may be rounded to 0.

COVID-19 vaccination data

COVID-19 vaccination data are collected via WHO regional office-specific systems for monitoring COVID-19 vaccination uptake. These data are pooled from numerous sources, including direct reports from Member States, WHO review of publicly available official data, or data collated and published by third-party sites. Data published by third-party sites have not been validated by WHO, and WHO cannot comment on accuracy or completeness. Differences in counts may occur compared to other sources, due to different inclusion criteria and data cut-off times.

Population data

Estimated populations and projections are drawn from:

- United Nations, Department of Economic and Social Affairs, Population Division. World Population Prospects 2019, Online Edition. Rev. 1 (2020 projections).
- Eurostat. "Demo_pjan" (population as of 1 January by country, year, age and gender; last updated by Eurostat on 2021-02-12; last year of data: 2020).
- National Statistics Office Malta.
- The Government of the Pitcairn Islands.
- Statistics Netherlands (CBS). Estimates of population for Bonaire, Sint Eustatius and Saba.

*Total population for France has been adjusted to account for the following overseas territories (French Guiana, Guadeloupe, Martinique, Mayotte, Réunion, Saint Martin).

The World Health Organization ("WHO") encourages public access and use of the data that it collects and publishes on its web site data.who.int. The data are organized in datasets and made available in machine-readable format ("Datasets"). The Datasets have been compiled from data provided by

WHO's Member States under the WHO policy on the use and sharing of data collected by WHO in Member States outside the context of public health emergencies.

Use of the data derived from the Datasets, which may appear in formats such as tables and charts, is also subject to these Terms and Conditions. Datasets may include data describing the Dataset called "Metadata". If any datasets are credited to a source other than WHO, then those materials are not covered by these Terms and Conditions, and permission should be sought from the source provided. You are responsible for determining if this is the case, and if so, you are responsible for obtaining any necessary permission from the sources indicated. The risk of claims resulting from infringement of any third-party-owned component in the materials rests solely with you.

You may use our application programming interfaces ("APIs") to facilitate access to the Datasets, whether through a separate web site or through another type of software application. By using the Datasets or any presentations of data derived from them, or by using our APIs in connection with the Datasets, you agree to be bound by these Terms and Conditions, as may be amended from time to time by WHO at its sole discretion.

Unless specifically indicated otherwise, these Datasets are provided to you under a Creative Commons Attribution 4.0 International License (CC BY 4.0), with the additional terms below. The basic terms applicable to the CC BY 4.0 license may be accessed here. By downloading or using the Datasets, you agree to comply with the terms of the CC BY 4.0 license, as well as the following mandatory and binding addition:

Any dispute relating to the interpretation or application of this license shall, unless amicably settled, be subject to conciliation. In the event of failure of the latter, the dispute shall be settled by arbitration. The arbitration shall be conducted in accordance with the modalities to be agreed upon by the parties or, in the absence of agreement, with the UNCITRAL Arbitration Rules. The parties shall accept the arbitral award as final.

Permission type

Publicly accessible

Prohibited uses

You shall not attempt to de-anonymise the Datasets or use the Datasets in a manner that falsifies or misrepresents their content.

You shall not, in connection with your use of the Datasets published on data.who.int, state or imply that WHO endorses, or is affiliated with, you, or that WHO endorses your use of data.who.int, or any

content, output, or analysis resulting from or related to the data.who.int, or any entity, organization, company, product or services.
