**Definition note 定義說明 (2010).** Modelled resident stock (ACS residual method), reference date 1 January 2010. AMBIGUITY FLAG: Table A2-1 prints TWO values for 2010 (10,790,000 and 11,590,000) reflecting a revision to align with the 2010 Census. 11,590,000 is recorded here because it is continuous with the 2011-2018 series; 10,790,000 is retained as an alternative row. Verify against the PDF before publication. Value read independently by two extractions.

**Definition note 定義說明 (2011).** Modelled resident stock (ACS residual method), reference date 1 January 2011. Read directly from Table A2-1 and independently confirmed by a second extraction. CORRECTION: an earlier pass recorded 11,600,000 from a rounded chart; that value was wrong.

**Definition note 定義說明 (2012).** Modelled resident stock (ACS residual method), reference date 1 January 2012. Read directly from Table A2-1; confirmed by two independent extractions.

**Definition note 定義說明 (2013).** Modelled resident stock (ACS residual method), reference date 1 January 2013. Read directly from Table A2-1; confirmed by two independent extractions.

**Definition note 定義說明 (2014).** Modelled resident stock (ACS residual method), reference date 1 January 2014. Read directly from Table A2-1; confirmed by two independent extractions.

**Definition note 定義說明 (2015).** Modelled resident stock (ACS residual method), reference date 1 January 2015. AMBIGUITY FLAG: Table A2-1 prints TWO values for 2015 (11,960,000 and 11,440,000) reflecting a methodology update. 11,440,000 is recorded as the report's current-methodology figure; 11,960,000 is retained as an alternative row. Verify against the PDF before publication.

**Definition note 定義說明 (2016).** Modelled resident stock (ACS residual method), reference date 1 January 2016. Read directly from Table A2-1; confirmed by two independent extractions.

**Definition note 定義說明 (2017).** Modelled resident stock (ACS residual method), reference date 1 January 2017. Read directly from Table A2-1; confirmed by two independent extractions.

**Definition note 定義說明 (2018).** Modelled resident stock (ACS residual method), reference date 1 January 2018. Read directly from Table A2-1; confirmed by two independent extractions. NOTE: the later DHS report (Baker & Warren 2024) revises January 2018 to 11,570,000; that revision is in the Long sheet.

**Definition note 定義說明 (2019).** Modelled resident stock (ACS-based residual method). Reference date 1 January 2019. The ohss.dhs.gov PDF returns HTTP 403; value read from Table 3 of the AAEA Choices Magazine article, which reproduces the DHS/OHSS table with full attribution to Baker and Warren (2024).

**Definition note 定義說明 (2020).** Modelled resident stock (ACS-based residual method). Reference date 1 January 2020. The ohss.dhs.gov PDF returns HTTP 403; value read from Table 3 of the AAEA Choices Magazine article, which reproduces the DHS/OHSS table with full attribution. DHS published NO January 2021 estimate because the 2020 ACS was unusable for this purpose.

**Definition note 定義說明 (2021).** Modelled resident stock (augmented residual method, ACS-based). Reference year 2021. 2025 revised vintage; source states the population 'grew from an estimated 10.5 million to 14 million' between 2021 and 2023.

**Definition note 定義說明 (2022).** Modelled resident stock (ACS-based residual method). Reference date 1 January 2022. Read from Table 3 of the AAEA Choices Magazine article reproducing the DHS/OHSS table. Independently corroborated at 10.99 million by the Social Security Bulletin (SSA, v85n2) and by US House Judiciary testimony (HHRG-119-JU10-Wstate-RodriguezJ).
